UCT-0019 (00-33)

## IN THE CLAIMS

Claims 1-7 (Canceled)

8. (Previously presented) A method for the manufacture of a conductive polymer composite, comprising

impregnating a polymer with a vaporous halogen in the absence of a volatile organic compound; and

exposing the impregnated polymer to a pyrrole-containing monomer vapor to form a conductive polymer composite.

- 9. (Previously presented) The method of claim 8, wherein the pyrrole-containing monomer vapor comprises pyrrole or pyrrole and N-methyl pyrrole.
- 10. (Previously presented) The method of claim 8, wherein the composite has a conductivity of about 10<sup>-7</sup> to about 10<sup>-1</sup> S/cm, inclusive.
  - 11. (Previously presented) The method of claim 8, wherein the halogen is iodine.
  - 12. (Previously presented) The method of claim 8, wherein the polymer is a foam.
- 13. (Previously presented) The method of claim 8, wherein the polymer is a polymerthane, a polybutadiene, or a styrene-butadiene copolymer.

Claims 14-22 (Canceled)
